

The second B200 system is configured.

This system is on Ubuntu 24 LTS.

Current info:

██████████ / ██████████-b200

Updated system chassis fw, uefi fw, gpu adapter fw
configured storage :

/data1 (1.7T)

/data2 (20T)

I'm still working out some cuda init issues with dcgmi diagnostics, but the team can test if they are able to run any or some workloads given this cuda init / dcgmi diagnostics issue.

B200 GPUs are operational under nvidia-driver-580-open. NVLink topology validated via nvidia-smi. Fabric Manager installation is not supported cleanly in the current open-driver Ubuntu 24 packaging configuration via apt without transitioning to a server-aligned driver stack.

B200 GPU enumeration is only stable under the open kernel driver path on Ubuntu 24; the server driver stack installs but does not bind devices correctly on this hardware/kernel combination. The current trajectory for ongoing support/development is towards the open kernel modules and decoupled user space tooling.

If requiring Fabric Manager validation, then the system would need to remain on Ubuntu22 with existing server-aligned driver stack, but community supported Ubuntu (22) LTS is until 2027 without extended enterprise maintenance support contracts. Or to wait for Nvidia to correct the dependencies for the open-branch / fabric manager drivers.

I cross checked with ██████████ / ██████████-b200 regarding the Fabric Manager, and it's currently on driver 570.86.1, CUDA Version: 12.8, but with the 580-server family drivers: nvidia-fabricmanager-580, nvidia-firmware-580-server-580.159.03, nvidia-kernel-common-580-server.

I don't recommend the backward trajectory of the OS or the driver stack implementation for current term compatibility with newer generations of GPU's available and future generations on the horizon.

==

██████████ 2:43 PM //management

Great! Please try on Monday to see how well it works

Legend:

X = Self
 SYS = Connection traversing PCIe as well as the SMP interconnect between NUMA nodes (e.g., QPI/UPI)
 NODE = Connection traversing PCIe as well as the interconnect between PCIe Host Bridges within a NUMA node
 PHB = Connection traversing PCIe as well as a PCIe Host Bridge (typically the CPU)
 PXB = Connection traversing multiple PCIe bridges (without traversing the PCIe Host Bridge)
 PIX = Connection traversing at most a single PCIe bridge
 NV# = Connection traversing a bonded set of # NVLinks
